📄 SUMMARY

Senior Full-Stack Engineer with 5+ years building and optimizing production web applications and backend systems using React, TypeScript, Node.js, Python, and AWS. Experienced in owning features end-to-end across frontend applications, APIs, databases, cloud infrastructure, testing, and production support. Built high-traffic consumer experiences at Eventbrite with hands-on experience in web performance, Core Web Vitals, reusable React components, A/B experimentation, and scalable backend architecture.

🛠 TECHNICAL SKILLS

- **Languages & Full Stack:** TypeScript, React, Material UI, Next.js, Node.js, Python, FastAPI, Go, NestJS, React Native, Tailwind, Redux, Context
- **Backend & APIs:** REST APIs, Node.js, Microservices, Event-driven Architecture, Serverless Architecture
- **AI & Agent Systems:** MCP, Multi-Agent Systems, LLM APIs, Agent Orchestration, Tool Calling, Guardrails, **LLM Evaluation**, OpenAI API, Gemini
- **Cloud & Infrastructure:** AWS, Docker, Terraform, Lambda, API Gateway, SQS, S3, EventBridge, SNS, Kafka
- **Databases & Data:** PostgreSQL, MySQL, MongoDB, DynamoDB, DynamoDB Streams, Redis
- **Observability:** CloudWatch, Datadog, PagerDuty, Sentry
- **Testing & Delivery:** Jest, React Testing Library, CI/CD, Jenkins
- **Growth & Marketing Tech:** Braze, Heap, Split.io, Statsig, Snowflake

💼 PROFESSIONAL EXPERIENCE

Senior Software Engineer, Eventbrite 10/2025 – 04/2026 | Remote, India

- Led and built Notification Center with Braze integration end to end, delivering **200k+** impressions (~6% CTR, ~14% for critical flows), tracked via Braze and Heap analytics.
- Developed and maintained a reusable React component library supporting legacy and micro-frontend systems, improving UI consistency and reducing integration effort across teams.
- Architected and scaled event-driven backend systems on **AWS**, enabling high-throughput, near real-time processing with a focus on reliability, latency, and resilience using TypeScript and Python.
- Designed asynchronous **ETL** data pipelines processing **millions of events** per day, enabling reliable analytics and business reporting with idempotency, retries, and failure recovery.
- Extended and maintained an existing Python service as part of migrating email delivery from SparkPost to Braze, integrating Nomad-scheduled workflows and SQS.
- Defined **SLA/SLOs** for Instagram Share integration (success rate, infra cost) and built CloudWatch alerting for real-time visibility across teams.
- Led code reviews and mentored junior engineers, driving best practices in system design, testing, and maintainability.

Software Engineer II, Eventbrite 07/2023 – 09/2025 | Remote, India

- Built and optimized high-traffic consumer surfaces (**Homepage**, City Browse, Editorial), improving performance and engagement.
- Led revamp of high-traffic category pages (Dating, Independence Day), building reusable components and optimizing entry points, driving **700K+** page-level and **65K+** collection-level conversions.
- Improved **Core Web Vitals** (LCP / TTFB / TTI / FCP) by implementing server-side caching and optimizing rendering paths, improving page load performance and **SEO**.
- Drove **A/B experiments** using Split.io and Statsig across core consumer surfaces, improving content discoverability and user engagement in collaboration with Product and Marketing teams.
- Owned backend architecture for Instagram Share integration **end to end**, implementing OAuth 2.0 authorization, REST APIs, idempotent workflows, retry strategies, and **AWS CDK infrastructure** for external platform constraints, while **collaborating cross-functionally**.
- Improved observability by migrating Datadog → CloudWatch, integrating PagerDuty, and owning on-call, reducing incident response time.
- Designed secure media workflows using **S3** access controls, CDN integration, and **GuardDuty malware protection** for third-party integrations
- Maintained and enhanced existing Terraform infrastructure, and contributed to migrating portions of infrastructure provisioning toward AWS CDK for improved developer experience and maintainability.

Full Stack Engineer, iTinker 05/2021 – 07/2023 | Chandigarh, India

- Built and scaled FRS platform to **100K+** users within the first month.
- Led a team of **5+** engineers, improving performance via Redis caching (~**35%** DB load reduction).
- Built backend services using Node.js, Python, and Go with PostgreSQL, MySQL, and MongoDB.
- Built **web, mobile, and backend systems** for a fintech/commerce platform (MMTC), implementing cart, checkout, and payment workflows and architecting **microservices with external payment gateway integrations** to support high-throughput transactions.
- Implemented unit and integration **testing** (Jest, RTL) to prevent regressions and maintain production reliability.
- Built Terraform-based infrastructure automation for provisioning AWS resources, including networking and security group configuration.
- Built Python-based test automation (pytest) for the fintech platform to support release reliability.

📁 PROJECTS

Supply-Chain Risk MCP Server & Multi-Agent PR Reviewer | Python, MCP, OSV.dev, deps.dev, GitHub APIs, Gemini API 08/2026

- Built an **MCP** server assessing **open-source** dependency risk across npm, PyPI, Cargo, and Maven using a composite score of CVSS severity, maintenance health, and license-conflict heuristics.
- Built a **3-agent PR review system** (Triage/Research/Synthesis) using real **MCP** protocol communication, hand-written orchestration, and a swappable LLM backend, with **guardrails and regression evaluation** against live APIs and LLM calls.

Real-Time Voice AI Agent | Pipecat, FastAPI, Qwen TTS 06/2026

- Built a low-latency voice assistant with streaming **STT→LLM→TTS** pipeline using **Pipecat's** based architecture for real-time bidirectional audio.
- Optimized inference latency using GPU-based deployment and efficient streaming, reducing response time for interactive use cases

🎓 EDUCATION

Master of Computer Applications, Panjab University, Chandigarh

2019 – 2021 | Chandigarh
